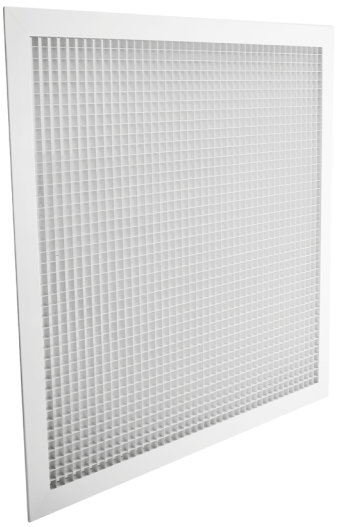
Mesh screen supply diffusers
RVA



Description

The RVA mesh screen diffuser is intended for high air flow ventilation systems. The diffuser is designed for installation on square ducts, plenum (expansion) boxes and as ductwork termination on suspended ceiling. The mesh size is 12.7 x 12.7 mm.
The diffusers are light-weight easy-to-install products and require no additional bracing of suspended ceiling panels. When installed on the PRV plenum box, they provide a uniform air extraction, while an insulated version of the plenum box reduces the ductwork and air noise level.

Material: aluminium
Finish: powder-coated
Standard colours: RAL 9016
