

Ventilation finish trim

ALNOR reserves the right to modify technical specifications
in line with the policy of continuous product improvement.

System description

System description

ALNOR ventilation finish trim products include ventilation parts and hardware to make the ventilation system complete with air grilles, diffusers, air valves and air expansion boxes.

Dimensions

Most ventilation finish trim components have fasteners customized to standard round ventilation ducts. The trim elements are attached to the ducts either directly or via dedicated air boxes. All other sizes are shown in the tables and specifications in the individual Product Data Sheets.

Installation instructions

The installation method depends on the components to be used and it usually varies according to how the ductwork has been installed.

Application advantages

As a result of their aesthetic finish and ease of installation, the ventilation finish trim components are the way to add the right finishing touch. The components enable adjusting the air flow rate to change the air supply to the ventilated rooms for superior indoor comfort.

Marking

ALNOR products carry the Polish conformity mark B for construction products and Product codes as shown in the technical specifications listed in this catalogue.
